## GETS INJUNCTION AGAINST RUBBER COMPANY

Koehler Not Pleased With Operation of Marathon Branch.

Marathon, Tex., July 1.—F. Vogel, of San Antonio, is here looking after the interests of Otto Koehler, who has brought suit in the 37th district court asking for an injunction, an accounting and the appointment of a receiver for the Texas Rubber Company, which is operating the Marathon branch.

The action is against William H. Statton, who is president of the Texas Rubber Company, at Marathon, and one of the heads of the guayule trust of the United States and Mexico, the Texas Rubber Company, and the Big Bend Manufacturing Company.

Koehler was formerly owner of all the stock of the Texas Rubber Company, and alleges breach of contract by Statton, failure to make an accounting, and an attempt to denude west Texas of its guayule shrub without giving any account of the returns.

In the allegations on which the petition is founded, the plaintiff says he agreed to transfer all the stock of the Texas Rubber Company and its holdings of land and guayule and machinery to Statton on condition that Statton pay \$50,000 cash down and incorporate a new holding company for \$100,000, issuing that amount in bonds and turning \$150,000 of the bonds over to Koehler.

Koehler alleges that up to May 1, 1910, that 232 tons of guayule rubber have been shipped from the Marathon plant and that the profits have been \$1000 per ton. Koehler also claims he has received \$5000.

Judge Dwyer issued the injunction asked on the condition that plaintiff give bond in the sum of \$10,000.

## MACHINERY FOR MARATHON

Marathon, Tex., July 1.—J. A. Parkinson, manager of the Marathon marble quarries, is in San Antonio purchasing new machinery. A derrick has been erected at the G. in railroad tracks at Marathon, and the output of the quarries will be shipped from this point. There is an inexhaustible supply of variegated marble adjacent to Marathon, and considerable granite has already been mined.

The young women of Marathon have made arrangements to celebrate the Fourth of July with a barbecue. The returns from the Jeffries-Johnson prize fight will be posted on bulletins at the local ball grounds, where a game will be played between the Marathon Meteors and the Squatters.

James McLeod, who has had charge of the international cable at Del Carmen mines, has left for Monterey, Mexico.

Fourth July watermelons On loc. Ardoins Market.

## SHOOTING INTO BUILDING

Butte, Mont., July 1.—A mine explosion from Boulder says: George Hart fired a 22-caliber rifle against a building in which a quantity of dynamite had been stored. A terrific explosion followed, which demolished Hart's home and damaged nearby buildings. Hart and his wife were killed, their baby fatally injured and two men named Robinson and Kirby killed.

## MINING AND OIL NEWS.

## REPORTED REORGANIZATION OF DEL CARMEN MINING CO.

Has Six and One Half Mile Aerial Tramway to Mexico Over Rio Grande; Custom House On El Paso End.

Marathon, Tex., July 1.—The Del Carmen Mining Company, which owns and controls the greater part of the mining industry in the vicinity of Boquillas, Mexico, is at present reorganizing its company to further develop its silver-lead mines on the Zaracoza and Vencadora properties. This company also holds one of the largest zinc mines in northern Mexico, having approximately 80,000 tons of zinc ore in sight that averages 45 percent zinc. The silver-lead mines which have recently been developed expose a considerable amount of high grade galena ore carrying a high percentage of copper.

An aerial tramway six and one-half miles long has been installed and is now ready for operation. This is the only international tramway in the world and links the United States and Mexico. Each nation has a custom house on either terminus.

The greatest difficulty encountered by the company has been to find some adequate means of transportation. The electric trucks which have been experimenting, proved a failure, and an irrigating system may be installed.

## LIANO MINE PROSPECTS GOOD.

In the Liano district, Texas, it is reported that the shaft in the gold-silver mine owned by F. M. Ramsey of Lampasas and associates, 12 miles south of Liano, is in good ore and that the prospects are favorable for the property becoming a shipping proposition. It is planned to sink the shaft to a depth of 700 feet. It is already down 200 feet.

## INSPECT MEXICAN DAMSITE.

J. E. Darroch and C. O. Lauffelt have returned from the Ocampo district, Mex., where they have been surveying the river and damsite for the purpose of securing data for the proposed dam and hydro-electric power plant.

## RICH STRIKE OF SILVER

## IN OLD ABANDONED MINE

Ore Runs from \$250 to \$2000 per Ton; "Picture" Values Much Greater; Is Famous Producer.

In the old Keystone mine at Mineral Park, Mohave county, Ariz., a shaft of 400 feet has been encountered, of which four feet is high grade shipping ore and nine feet is fine milling ore, in the 150-foot level. Seldom has ore been found in that part of the district so rich in native and ruby silver, and never before in such large bodies. Assays made from samples of the 100 tons already broken run from \$250 to \$2000 per ton, while there are many tons of material ore which greatly exceeds the latter value. A conservative estimate is said to show that the four feet of ore exposed will average \$500 a ton as mined.

## LAREDO GAS WELLS MAY

## SUPPLY SOUTHERN TEXAS TOWNS

San Antonio, Tex., July 1.—Natural gas and all the economic advantages linked with it, will in the very near future be within the reach of this city. The great natural gas tract south of here near Laredo, Webb county, is being proved day by day to be fully capable to supply not only San Antonio but every other southern Texas city as well. One of the wells on the property of the Producer Oil company, said to be a subsidiary concern of the Standard Oil, sent a column of oil 175 feet high, subsiding afterward to a rush of gas, the roar of which can be heard five miles away.

## MORE DRILLS FOR THE FIELD AROUND TOYAH

Eastern Capitalists Prepare to Begin Work—Texas Company Busy.

There is increasing activity in the Toyah oil fields east of El Paso, in what the geologists call the Trans-Pecos Texas country, and from now on great developments are expected there.

A number of Oklahoma oil people have just arrived at Toyah, the nearest town to the oil fields and are arranging to drill a deep well on the lands they have purchased from the Texas & Pacific Railroad Lands company, through its agent, Col. Abrams, of Dallas. They already have an association in an outfit from Oklahoma to Toyah. The site where they will drill is about 20 miles southwest of Toyah and the wells of the Texas Oil company, being north of and in the vicinity of San Maritine, a station on the dividing line between El Paso and Reeves counties. Thus the oil territory is being steadily traced west and north from the point of the original strikes, and it looks as if the predictions of the geologists of Texas and the United States geological survey that the main source of the petroleum would ultimately be found in the Salt Flat basin to the northwest of Toyah, are about to be verified.

A new organization of local people from Reeves and Pecos counties has let a contract with some professional drillers from the eastern oil fields of Texas to drill ten shallow wells in the present field north of Toyah. Their present plan is to tap the first stratum of oil sand from 100 to 200 feet in depth, which the first exploratory drilling a few years ago demonstrated that there is a body of fine lubricating oil. These proposed wells will be connected up by pipes, which will in turn connect with one central pump, so that the united product may amount to from 20 to 50 barrels a day.

A drilling rig is being shipped to Toyah by some eastern people for the purpose of sinking a deep well four miles southwest of the present operations of the Texas company.

Some Bakersfield, Calif. oil men are making arrangements to drill on lands owned by H. B. Stevens and associates of this city, which lands are situated about eight miles south of the Texas Oil company's wells.

The Texas Oil company is going steadily along with drilling its deep well and this official seems to be very sanguine as to the outcome. This drill hole is now down 1700 feet and good oil signs are showing. It is reported that this well will be shipped to Toyah.

With the exploratory work now actually in progress and the new operations now to be inaugurated by independent operators the merits of the new field will soon be demonstrated.

## BIG BULLION SHIPMENT

## FROM MOGOLLON DISTRICT

Socorro Mines Cleanup Nets 19,000 Ounces; Ernestine Takes Over Top Mogollon Mine; Rains Quagmire Fires.

Mogollon, N. M., July 1.—At the Socorro mines, the vein on the sixth level east continues to widen as development is advanced towards the Queen lode. The best of the surface, which is 750 feet below the surface at this point, now 14 feet wide, averages \$32 per ton. Sinking will be resumed to the seventh level at an early date. The last bullion shipment, exceeded 19,000 ounces of gold and silver, probably the largest single cleanup yet made in the district. Regular shipments of concentrates, averaging \$1000 per ton or better, are made in addition to the bullion.

The Ernestine Mining company has taken over the option on the Top mine, adjoining on the west, the consideration being \$350,000 in capital stock of the Ernestine. The consummation of this deal makes one of the largest and most valuable groups of the district.

The Leadwood mines' 400-foot station has been completed, including timbering, and the shaft sunk 25 feet below this point.

The Helen Mining company has vigorous work in progress at both the power plant on Whitewater creek and the Confidence group of mines.

The Ernestine Mining company is cross-cutting its ore vein at the face of the main tunnel.

Rains the past week have relieved the effects of the unusually dry weather and have extinguished several forest fires in the district.

We Will Close All Day Monday July 4th

## MACHINERY IMPROVEMENTS FOR CANANEA MINE COMPANY

Cananea, Son., Mex., July 1.—The Cananea Consolidated Copper company's reboiler furnace is undergoing its periodical overhauling. It is being almost entirely rebricked and will soon be ready for one of the longest runs in its history. The furnace runs about three months before in need of repair. The new reboiler, alongside the present one in use, is almost completed, nothing but the steel work is now necessary to complete it ready for operation. The boilers have been placed and it has been bricked up.

The additional set of two clinkering devices on the slag dump, alongside the two now in use, will soon be ready for handling the slag and flue dust. Between the two machines, all the slag from the converters can be handled. The slag is run down a trough, into which the flue dust is added. This causes the slag to froth and when it froths it forms a clinker. This is then again run through the furnaces, making a good flux.

## SANTA FE'S SHAFT SHOWS UP

## GOOD AT CANANEA, MEX.

Cananea, Son., Mex., July 1.—The Santa Fe's Montoya shaft is looking better every day. It has reached a depth of 125 feet and is almost bottomed in solid ore.

At the 100-foot level the vein was a foot in width, but gradually widened out until it is now almost taking in the entire shaft. The ore is a lead-silver and looks good. It occurs in time and carries some chalcocite.

Ever since this shaft has been worked by the Santa Fe it has been showing up better and the company expects to develop the property to such a degree that a mill can be erected at the mine, which is located about 12 miles southeast of Cananea. P. J. Tehaney is in charge of the property, he being president of the company. Several well-known capitalists of the southwest are interested with him.
